

AskWATERS

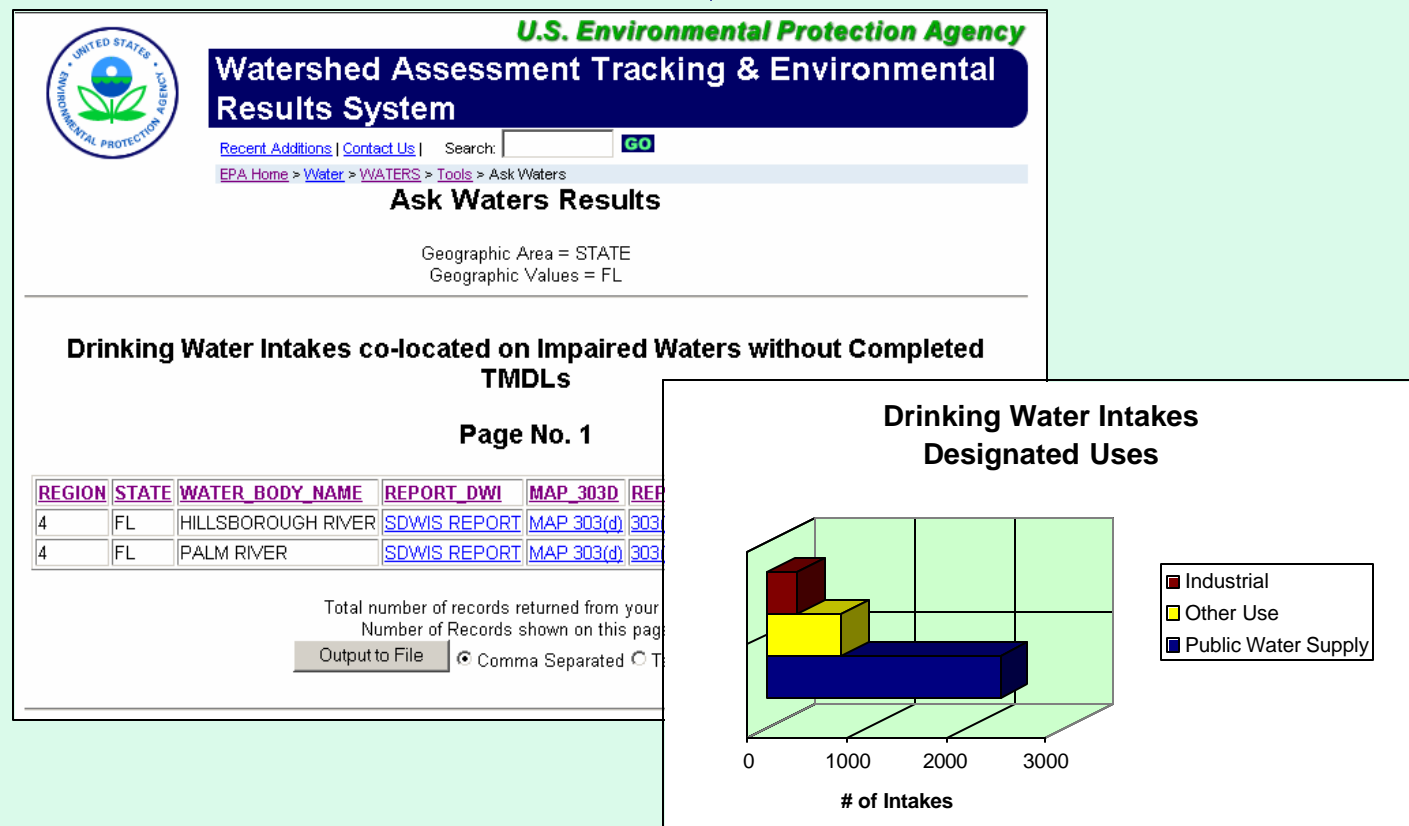

Enabling Water Program integration based on hydrology

What is it?

AskWATERS is a web-based query and reporting tool that provides a question and answer interface to complex cross-program water analyses. Summary table, bar, and pie charts, are accompanied by detailed listings with links to maps and file downloads. Advanced users can build their own reports.

What does it do?

AskWATERS answers cross-program questions using data linked through WATERS and the existing architecture and available services. The application allows the examination of complicated data relationships while producing understandable web reports. Components of the interface are reusable and customizable providing a consistent interface to the business needs of the water program.
